WEIGHT REDUCTION
COMPARED TO SOLID BEAM

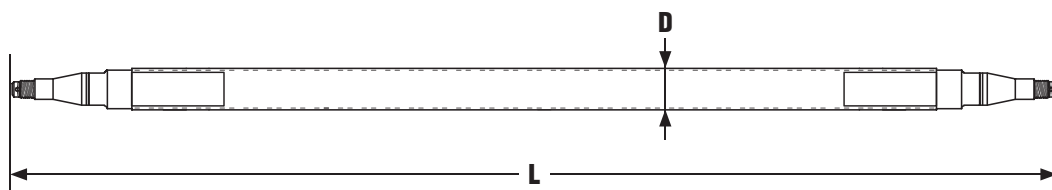

AL-KO TUBE AXLES

THE STRONG LIGHTWEIGHT AXLE SOLUTION

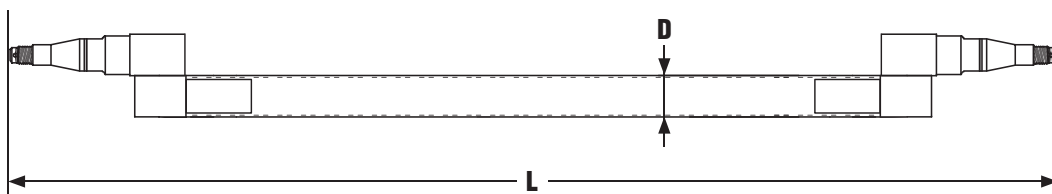

AL-KO Tube Axles offer significant weight saving compared to a solid beam. Due to their stiffness & design, capacity doesn't reduce proportionally to weight. Tube Axles can be made in traditional configurations (straight & overlay) with or without brakes.

This makes AL-KO Tube Axles attractive to manufacturers who want to reduce weight of their trailer or caravan whilst maintaining carrying capacity.

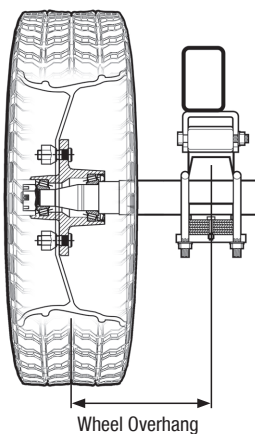

The range of AL-KO Tube Axles are made in Australia from premium materials specifically to suit Australian conditions. Axles and drums can be zinc plated for a superior finish.

Straight tube (1450kg & 1600kg)

Overlay tube (1450kg & 1600kg)

Note: AL-KO advise the "overhang length" as the distance from the centre of the spring pack to the centre of the tyre.

- ✓ Up to 40% lighter than a solid beam
- ✓ Removes weight whilst maintaining capacity
- ✓ Premium zinc plated axles & drums
- ✓ High strength C450 grade tube material
- ✓ Made in Australia for Australian conditions
- ✓ Available in straight & overlay configurations

PRODUCT RANGE						
Capacity (ATM)	Axle Type	Bearings	Tube Axle Material Grade	Tube Material Dimensions (mm)	Highway Max Wheel Overhang	Off-road Max Wheel Overhang
1450 kg	Straight/ Overlay	Slimline	C450	50x50x6	285mm	215mm
1600 kg	Straight/ Overlay	Parallel	C450	50x50x6	260mm	195mm
