**BOSCH**  
Invented for life

Anticipate. Assess. Respond. **TOW ASSIST** does it faster than you can and that's important when a split second decision makes all the difference for your family. This revolutionary, world-first active safety braking technology for caravans, campers and trailers is an industry breakthrough. Get smart and find out more at [alko.com.au](http://alko.com.au)

# TOW WITH CONFIDENCE

Developed in collaboration with Bosch, Tow Assist brings the most advanced automotive level safety systems to caravans and trailers to protect you and all the important things in your life.

Drivers will have the confidence and piece-of-mind with Tow Assist that their trailer is equipped with the most advanced safety features. With features such as ABS, sway mitigation and lane change control, trailer owners will not only reduce flat spotting tyres but can significantly reduce the likelihood of losing control in the event of unpredictable road conditions, sudden traffic changes, or evasive manoeuvres. The system also provides an odometer feature integrated into an engaging mobile app, providing suggested maintenance intervals and customer service-oriented information.

**With AL-KO and Bosch, you're in safe hands.**

## ELECTRIC ABS BRAKES

- Decreased chances of jack-knifing trailer during panic or dynamic braking. Optimized braking performance by increasing output from all brakes
- Increased tyre life by reducing flat spotting

## SWAY MITIGATION

- Keeps trailer in-line with tow vehicle during sway events
- Intuitively reacts with appropriate braking to ensure stability without driver input

## TOWABLE ODOMETER

- Built-in trailer mileage tracking accessible via Bluetooth® app
- Identify critical maintenance intervals to avoid unwanted breakdowns
- Provides a platform for efficient management of rental or fleet trailers

## LANE CHANGE CONTROL

- Automatically detects sharp input of road avoidance
- Quickly applies and disengages brakes without driver input
- Compatible with OEM / Aftermarket brake control units.

Tow Assist is initially available to manufactures on approved components.

Tow Assist includes an electronic control unit (ECU), wiring harness, indicator light displaying system function and diagnostic codes, and axles equipped with wheel speed sensors and tone rings.
